RFM Insight

Frequency is highly concentrated: 97% of active customers are F1. However, customers with higher purchase frequency show substantially higher average observed value, indicating that repeat customers follow a different value pathway from one-time buyers.

TARGET BRAZIL ECOMMERCE | RECENT HIGH-VALUE CUSTOMER PATHWAYS

Average Order Value

Average Items per Order

High Value Customer Insight

- High-value one-time customers generate observed value through a single high-ticket purchase, averaging R\$390.63 per order. High-value repeat customers reach a similar observed value per customer through 2.16 lower-value purchases averaging R\$194.91 each.
- Basket size is nearly identical (1.32 vs 1.29 items/order), indicating that purchase frequency and order value—not basket size—differentiate the two observed pathways.

*High-value = observed customer value > ₹182.40 (M4); recent = last purchase within 163 days (R4); one-time = exactly 1 completed order (F1).

High Value Customer Insight

Recent high-value one-time customers are concentrated in SP, RJ and MG (61.24%), with **80.82% placing single-item orders**—indicating that high observed value is primarily associated with **higher-ticket purchases** rather than larger baskets. **Credit cards** are also the dominant payment method.

*High-value = observed customer value > ₹182.40 (M4); recent = last purchase within 163 days (R4); one-time = exactly 1 completed order (F1).
